different articles in  
stock

Technical competence. Reliable delivery. Customer-oriented services. For more than 130 years, REYHER has been the synonym for safe and innovative solutions in terms of C-part supplies.

Every day we work at our location in Hamburg on increasing our expertise in all fields of interest.

Today, REYHER is one of the leading trading companies for fasteners and fixing technology in Europe.

We have a clear objective: To offer you a wide product range that meets the highest demands and fulfills your need to make sourcing highly efficient.

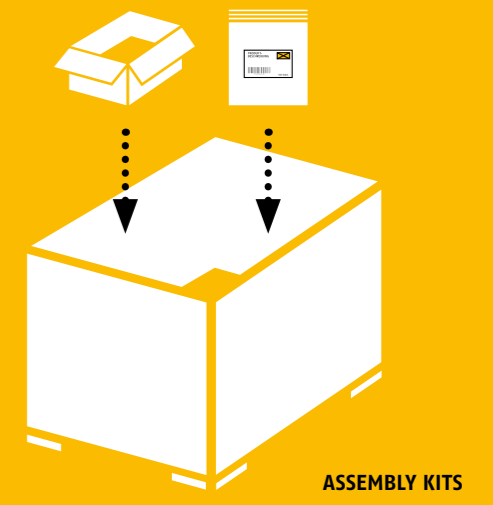

# REYHER COMPETENCES

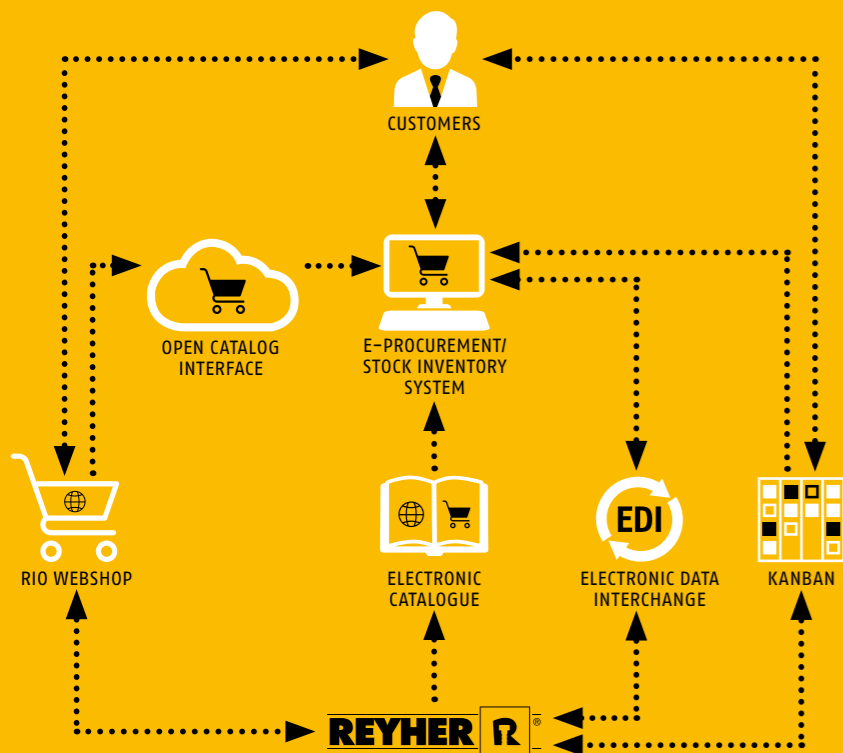

Within the scope of C-parts management, using **ROM** – REYHER Order Management will ensure the highest supply and process liability for our customers. Modules that can be combined, RFID technology, barcode systems, flexible labelling and modern data interchange combine to shape an all-round seamless package for smooth materials supply. Safely, precisely, and flexibly adapted to our customers' individual needs.

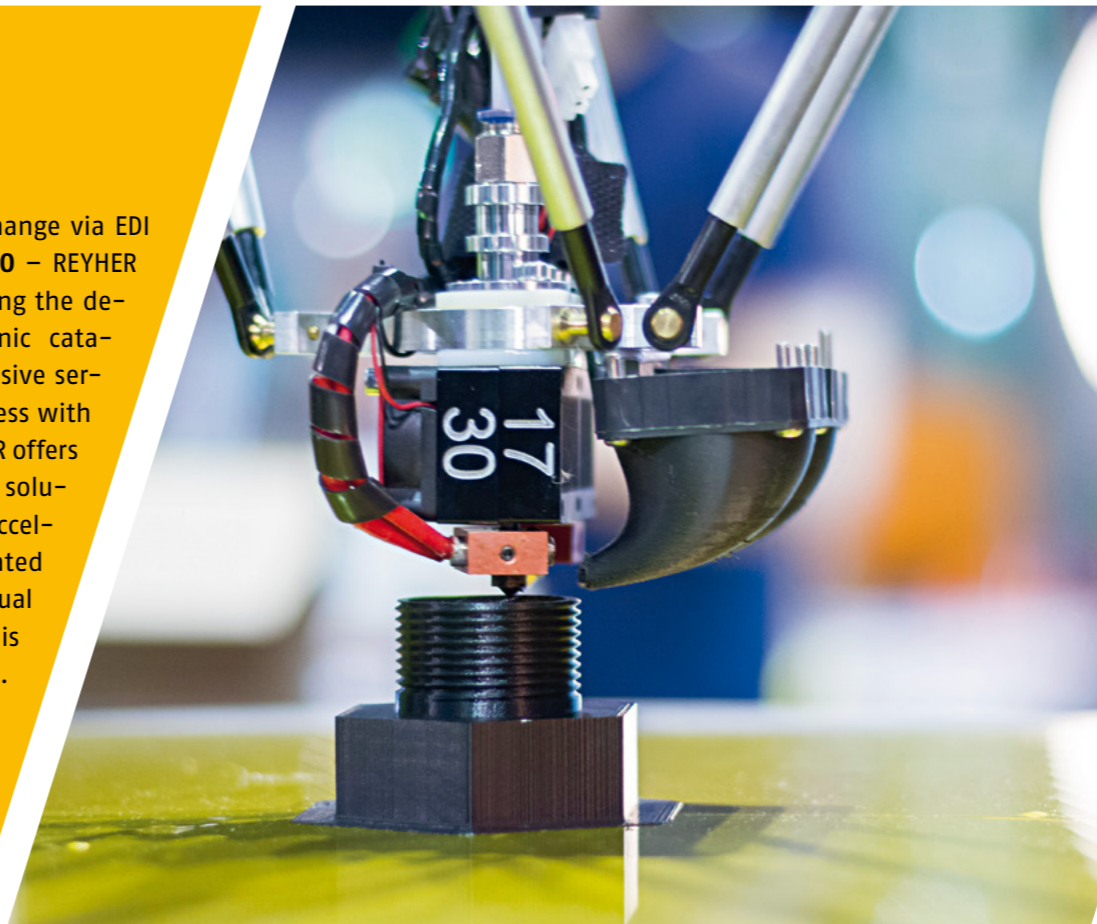

For the assembly of agricultural machines and as repair sets for spare part stocks, sets and assembly kits make processes more efficient. **RKP** – REYHER Kitting & Packaging meets every customer need. With need-based item compilation, packaging and labelling, tailor-made sets or assembly kits are composed for the particular individual case. The goods are delivered in cardboard or wooden boxes or KLT, as demanded by individual customers.

Whether it is direct data interchange via EDI (Electronic Data Interchange), **RIO** – REYHER Internet Order webshop, capturing the demand via barcode, or electronic catalogues: We offer you comprehensive service to optimise your order process with you. For series production, REYHER offers EDI solutions. REYHER E-business solutions make sourcing easier and accelerate the order process. Automated data processing reduces the manual inspection effort. Data quality is improved and errors are avoided.

**REM** – REYHER Engineering Management deals with all technical issues and details in terms of fasteners and fixing technology. Due to the complex influences in the commercial vehicles sector, particular attention is paid to corrosion protection systems. Particularly in case of agricultural machines, these requirements are a real challenge. Our experienced engineers and technical experts in the REM team provide competent advice to our customers anytime.
