

FASTENERS FOR WINDENERGY

REYHER – AN OVERVIEW

REYHER
> 130 YEARS
EXPERIENCE

SUSTAINABILITY

We save
resources

- ▶ Utilising reusable packaging
- ▶ Third-party delivery by rail
- ▶ Digitized handling

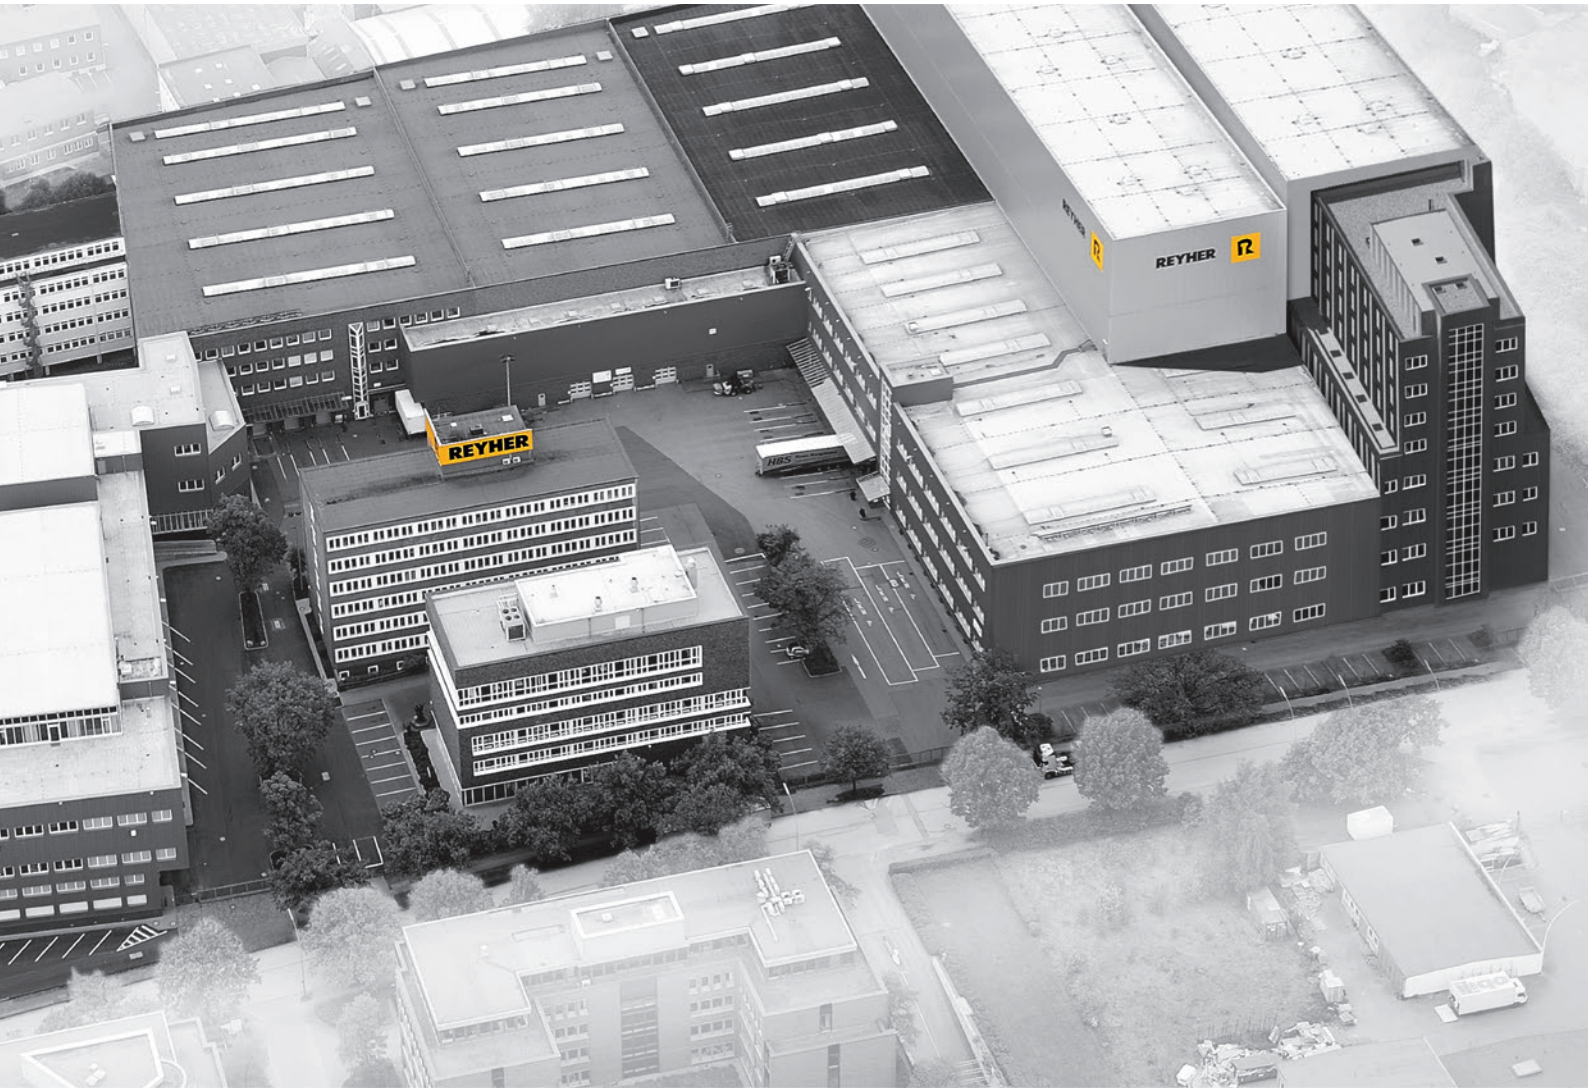

We reduce
CO₂ emissions

- ▶ Pallet covers made of grass paper
- ▶ Electricity from renewable energies

We take
responsibility

- ▶ Certified management system
- ▶ Code of Conduct
- ▶ Material compliance

> 960
employees from more
than 16 countries

Technical expertise. Reliable deliveries. Customer orientated services. For over 130 years, the name REYHER has stood for secure and innovative solutions regarding the supply of C-parts.

REYHER is one of the leading trading companies for fasteners and fixing technology in Europe.

Our aim: Offering you a wide range that meets the highest demands and your need for a high level of procurement efficiency.

> 24.000
items ordered per day

> 450 Mio.
euro turnover in 2023

> 310 tonnes
of goods shipped per day

> 12.000
customers worldwide

REYHER – SHAPING THE FUTURE

REYHER has supplied the wind energy sector for over 30 years. We are convinced that a sustainable energy supply is the right path for Germany and guarantee smooth and safe supplies to produce, build and maintain wind turbines with our products. By 2030, 80 per cent of the electricity produced in Germany will come from renewable energies and we supply fasteners of the highest quality to help achieve this.

In our range customised for wind power customers we have the most varied galvanised and zinc flake coated items in stock, as well as the materials A4, A5 and Duplex.

Security of supply plays an important role in the assembly of wind turbines: Reliable production and delivery dates must be perfectly coordinated with each other. Our fully automated warehouse logistics offers plant manufacturers and suppliers the necessary planning certainty as well as reliable and quick just-in-time delivery.

As a REYHER customer you will benefit from comprehensive services, many years of experience and technical know-how, customised to meet the specific needs of the wind energy sector. We will ensure you have an efficient and reliable procurement process – so you can fully concentrate on your work.

OF WIND ENERGY WITH US

REYHER – EXPERTISE

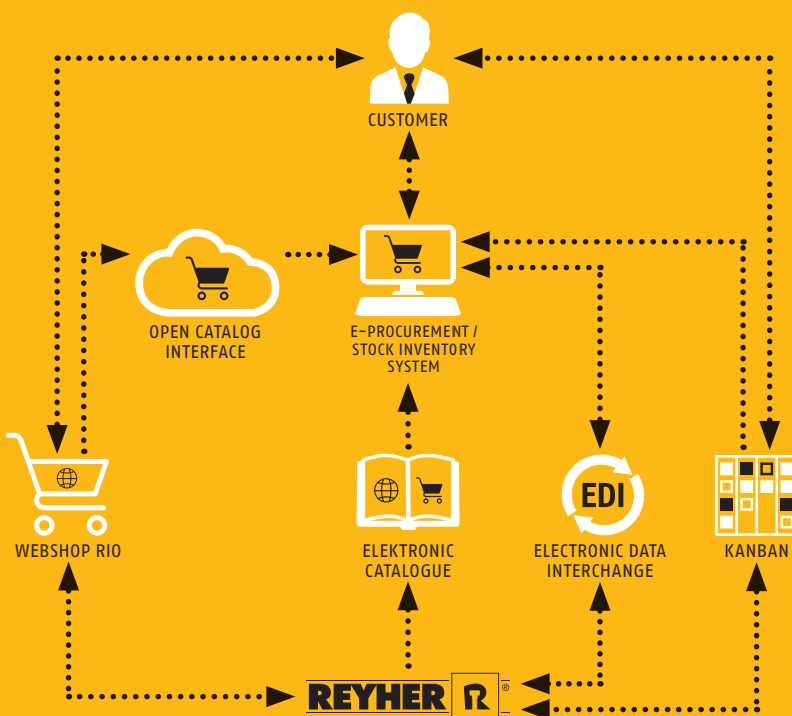

The highest security of supply and process security is essential for servicing and assembling wind turbines. We make sure of this by using **ROM – REYHER Order Management** for C-part management. Sophisticated kanban supply systems offer combinable modules, RFID technology, barcode systems, flexible labeling and modern data transmission paths.

An all-round care package that smoothly supplies material – secure, precise and aligned on the individual requirements and needs of the wind energy sector.

We offer our customers a variety of e-business solutions to make the order process for wind energy fasteners as easy and efficient as possible. With our extensive range of services we efficiently support plant manufacturers and suppliers with simplified and direct procurement thanks to direct data exchange via EDI (Electronic Data Interchange), our webshop **RIO – REYHER Internet Order**, by assessing demand by barcode or using electronic catalogues.

Automated data processing via EDI also reduces manual checking – improving data quality and helping to avoid errors.

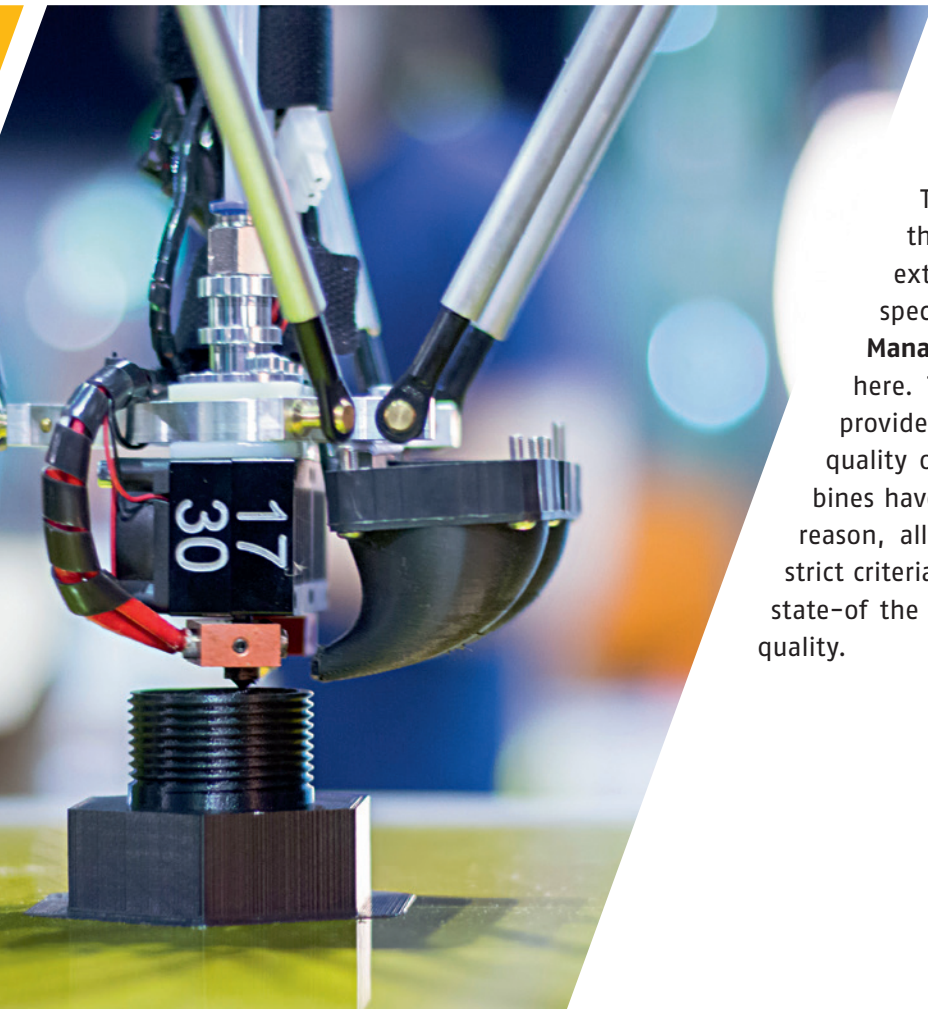

RKP[®]
REYHER KITTING & PACKAGING

Repair sets and complex kits, tailored to the sometimes extreme challenges involved in assembling wind turbines – this is what **RKP – REYHER Kitting & Packaging** offers. Whether working on the tower, rotor blades or in the turbine house: We realise the assembly of the sets in accordance with customer wishes.

Fasteners and accessories are put together as required in the exact installation order and then delivered directly to the building site. Guaranteeing faster, more efficient and safer work.

REM[®]
REYHER ENGINEERING MANAGEMENT

The technical demands made when planning the fasteners used and of their quality are extremely high in wind energy in particular. Our specially trained **REM – REYHER Engineering Management** team provides the important support here. The experienced engineers and technicians provide expert advice, including on the safety and quality of REYHER products. Fasteners in wind turbines have to withstand extreme stresses and for this reason, all products are selected in accordance with strict criteria and checked at REYHER headquarters using state-of-the-art methods – ensuring constantly reliable quality.
