

Fasteners with zinc-nickel coating

**NEW IN
RANGE**

More than 250 items
with zinc-nickel coating
immediately available in stock.

Zinc-nickel-coated screws, nuts and washers combine high corrosion resistance with a very low coating thickness. This makes them not only extremely resistant to outdoor use, but also particularly precise, even with small dimensions.

Thanks to good hydrogen-permeability of the coating layer, no hydrogen embrittlement occurs up to strength class 10.9. In addition, the fasteners are harmless to health, even for people with nickel allergies.

These properties make zinc-nickel products suitable for use in a wide range of areas.

All advantages at a glance:

- **Corrosion resistance of 720 hours RR**
- **No hydrogen embrittlement up to strength class 10.9**
- **Only 5–8 µm coating thickness**
- **Precise assembly thanks to defined friction coefficient window**
- **Harmless to health, even for people with nickel allergies**
